Project

- **Cricket Score Prediction**
  This application helps you in predicting the score from current over taking into consideration the current runs made by the team , no of wickets , no of overs. This application is also capable of predicting the winning percentage of a team based on the team selected . It compares the playing 11 players from both the team to predict who has the better chances of winning

- *Railway Reservation Web Application*

Designed a web application for railway reservation which generate a unique id and generate a QR code for every booking . It also store every booking done . Developed the front end using Java also it had SQL at its back to store all the booking . It was also able to calculate the fare for single trip and round trip.
